PROFESSIONAL SUMMARY

Backend Engineer with 3+ years of experience turning real operational problems into working software — from automating civic organization administration to integrating AI into production platforms. Comfortable owning a system end-to-end: gathering requirements from actual stakeholders, designing secure and reliable architecture, and shipping something people depend on daily. Currently building AI-powered product features while independently delivering full-stack systems for clients and organizations.

TECHNICAL SKILLS

- **Languages & Runtime:** JavaScript, Node.js
- **Backend Frameworks:** Express.js
- **Frontend:** React, Vite, EJS (SSR)
- **Databases:** PostgreSQL (incl. Supabase), MongoDB, Redis
- **Authentication & Security:** WebAuthn (passkeys), JWT, bcrypt, GPS/geofence verification, VPN/proxy detection, role-based access control
- **Queues & Automation:** BullMQ, n8n
- **Hosting & Infrastructure:** Render, Vercel, Oracle Cloud
- **API Design:** RESTful API architecture, third-party API integration

PROFESSIONAL EXPERIENCE

Certimind AI

Freelance Developer | Jul 2026 – Present

- Build and maintain both backend and frontend for an AI-powered certification readiness platform, currently in active development
- Design backend services (Node.js, Express.js, PostgreSQL) and integrate the Anthropic SDK directly to power AI-driven features, using a lean architecture suited to MVP scope
- Own end-to-end feature delivery — from API/schema design through to the user-facing interface

CDSConnect

Lead Architect and Developer | Aug 2026 – Present

- Engineered the backend architecture for a mobile-responsive community service management platform using Node.js, Express.js, and PostgreSQL.
- Implemented WebAuthn passkey authentication to enforce hardware-bound security, single-device authorization, and mitigate credential phishing.
- Developed custom geofencing middleware using native geographic spatial logic to validate physical attendance during user check-ins.
- Designed an append-only transaction ledger with immutable audit logs in PostgreSQL to secure token wallet operations and automate PDF clearance slip generation.

DemiEssence

Freelance Developer | Nov 2025 – Jan 2026

- Delivered a full-stack SSR order management system (Node.js, Express.js, EJS, MongoDB) for a client's business, now used as the internal operations dashboard for their staff
- Built multi-role access control (admin/staff/customer) with multi-currency finance handling and automated delivery deadline tracking
- Designed and implemented an end-to-end complaint-tracking workflow
- System remains in active use alongside the client's separate public-facing website

SELECTED PROJECTS

Curio — Personalized News Digest Platform

Tech Stack: Node.js, Express.js, MongoDB, Redis, BullMQ, N8n, Nodemailer, EJS, Tailwind CSS.

- Architected an automated news aggregator that processes 130+ daily articles via NewsData.io with 7-day TTL auto-deletion in MongoDB.
- Built an asynchronous multi-worker system using BullMQ and Redis to handle news ingestion, email dispatch, and inactivity tracking.
- Designed MongoDB aggregation pipelines using \$expr operators to group categories and isolate scheduled digest recipients directly at the database layer.
- Implemented shared category-level Redis caching and bulk pipeline invalidation to eliminate redundant database queries.
- Managed bulk email throughput by enforcing a 10-message concurrency limit using Promise.allSettled and p-limit.
- Secured API endpoints with Helmet, rate limiting, MongoDB sanitization, HPP, and httpOnly JWT cookies.

Ludo King – Multiplayer Game

Tech Stack: Node.js, Express.js, Socket.IO, EJS, Tailwind CSS, Passport.js

- Built real-time multiplayer Ludo game with online room creation and joining
- Used Socket.IO for synchronized dice rolls, player turns and game state management
- Implemented complete game logic including turn management, rule enforcement and win conditions
- Optimized for low latency to ensure smooth real-time gameplay

EDUCATION

BSc Botany

University of Lagos, Nigeria | 2025
